MSc Neonatology

The MSc Dermatology is a bespoke derma clinical education programme which is normally delivered fully online. The programme offers you the unique opportunity to learn alongside and with other experienced clinicians who are undertaking a similar role within dermatology units across the world. You will have access to dermatological modules which have been developed by renowned derma specialists, most of whom are senior members of the European Dermatological Society for Research (EDSR). In addition to increasing your dermatological knowledge you will be expected to further develop your key transferable skills including communication and discourse, analysis and synthesis, collaboration and social networking.

The aims of the programme are to: support your academic development in Dermatology. This programme will develop your independent and critical thinking skills and will enable you to question dermatological healthcare practice and policy. It will also provide you with the opportunity to acquire the knowledge and skills necessary to address and find innovative solutions to complex problems in Dermatology.

Modules

- Dermatology in clinical practice overview
- Dermatological Haemodynamics
- Lumps, bumps and skin cancer
- Lesions at specific sites
- Inflammatory Dermatoses
- Skin infections
- Drugs used in Dermatology
